DETAILED ACTION

Response to Amendment

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by O'Neil et al. (U.S. Patent No. 6,506,140).

As to claim 1, O'Neil et al. disclose a speed control for a multi-mode electro-mechanical transmission (15) including an input member (17) coupled to a prime mover, at least one planetary gear set, at least one motor, at least one torque transfer device, a plurality of operating states and an output member, comprising: an open loop motor torque controller operative to control a pre selected transmission speed to a target speed as a predetermined function of pre selected transmission torques and accelerations (See Col. 2, lines 18-50; col. 7, lines 59-64).

As to claim 2, O'Neil et al. disclose at least one closed loop effort operative to act upon a predetermined transmission speed error (See col. 7, lines 64-67).

As to claims 3-6, O'Neil et al. disclose the plurality of operating states includes a first state effective to operatively couple the input to the output through a first gear set, a

second state effective to operatively couple the input to the output through a second gear set, a third state effective to operatively decouple the output from the transmission, and further wherein when one of said first and second states is operative the preselected transmission member torques comprise input member torque and output member torque, and the preselected transmission accelerations comprise input member acceleration and output member acceleration (See col. 5, lines 15-35 different operating states) (See col. 2, lines 23-67 the different operating gears).

Allowable Subject Matter

Claims 7-27 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.
